

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

Magma Energy Corp. (the "Company" and, together with its subsidiaries, "Magma") was incorporated on January 22, 2008, pursuant to the *Business Corporations Act* (British Columbia), and effectively commenced operations in February 2008. On July 7, 2009, the Company completed an initial public offering ("IPO") and listed its common shares on the facilities of the Toronto Stock Exchange ("TSX") under the symbol "MXY".

Magma's mission is to become one of the leading primary geothermal power companies in the world. Magma intends to achieve this by increasing its production of geothermal electricity through the advancement of its existing projects, discovering new geothermal resources and by acquiring new geothermal energy projects.

Magma is actively engaged in operating, developing, exploring and acquiring geothermal energy projects in North America, South America and in Iceland. Magma's head office is located in Vancouver, Canada.

This management's discussion and analysis ("MD&A") focuses on significant factors that affected Magma during the relevant reporting period and to the date of this report. The MD&A supplements, but does not form part of, the unaudited consolidated financial statements of Magma and the notes thereto for the six months ended December 31, 2010 and 2009 and, consequently, should be read in conjunction with the aforementioned financial statements and notes thereto. In addition, this MD&A should be read in conjunction with Magma's audited consolidated financial statements for the year ended June 30, 2010, the related MD&A for that period and Magma's Annual Information Form ("AIF") for the year ended June 30, 2010, which are available on System for Electronic Disclosure and Retrieval ("SEDAR") at www.sedar.com.

All amounts in this MD&A are expressed in United States dollars unless otherwise indicated. References to C\$ are to Canadian dollars. References to ISK are to Icelandic kroner.

All financial information has been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP").

Unless otherwise indicated, all references to power generation or capacity in megawatts ("MW") in this MD&A are to gross power generation or capacity.

Forward Looking Information

Except for historical information contained in this MD&A, the following disclosures are forward-looking information or future oriented financial information and as such are based on an assumed set of economic conditions and courses of action. Please refer to the cautionary note regarding the risks associated with the forward-looking information at the back of this MD&A and the risk factors set out under the headings "Management of Financial Risks" in this MD&A and "Risk Factors" in Magma's AIF for the year ended June 30, 2010 available on SEDAR.

Highlights of the Quarter Ended December 31, 2010

- ☺ In November 2010, Magma completed its slim hole drilling program at the Mariposa reservoir in Chile and is ready to move to the exploration drilling phase.
- ☺ On December 15, 2010, the Company extended its existing C\$10 million credit facility from a 12 month term to a 24 month term and has increased the amount available under the facility to C\$20 million.
- ☺ On December 20, 2010, the Company issued 24,808,569 shares to a subsidiary of Geysir Green Energy ehf ("GGE") pursuant to the conversion of the subscription receipt issued to GGE as part of

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

the consideration paid by Magma Energy Sweden A.B. ("Magma") for the acquisition of its 98.53% interest in HS Orka hf completing Magma's obligations to GGE under the share purchase agreement.

Geothermal Energy Projects

Significant events, transactions and activities on Magma's geothermal properties which occurred during the three months ended December 31, 2010 and to the date of this MD&A are disclosed below. The reader is cautioned that geothermal resources and probabilistic estimates of MW capacity, as disclosed in this MD&A, have a great amount of uncertainty as to their existence and as to whether they can be accessed in an economically viable manner. It cannot be assumed that all of, or any part of, a geothermal resource will be commercially extracted or that estimates of MW capacity will be achieved.

Operating Projects

HS Orka Operations, Iceland

In June 2010, HS Orka took possession of a 50 MW Fuji Electric turbine generator for its Reykjanes power plant which currently produces 100 MW from twin Fuji units. HS Orka plans to expand the Reykjanes plant's output to 180 MW in two phases pending permitting and new power purchase agreements ("PPA") with one or more power purchasers. A 50 MW (phase 1) expansion is planned for 2012 (pending PPA negotiations). An additional 30 MW (phase 2) expansion is scheduled to commence following the phase 1 expansion and requires no additional drilling as the source is low pressure steam generated from current operations. In addition to the Reykjanes expansion projects, HS Orka has the capability to develop existing inferred and indicated resources on its current exploration properties Eldvorp and Krysuvik thus increasing total production up to 405 MW.

The current budget for the 50 MW (phase 1) expansion is \$131.0 million, of which approximately \$41.7 million has already been spent. The remaining cost for the expansion is expected to be funded mainly from HS Orka's cash on hand and by debt financing.

To proceed with the expansion of the Reykjanes plant, HS Orka has applied for and will require an expansion to its operating permit from the National Energy Authority ("Orkustofnun"). Orkustofnun has now received the results from the drilling of well RN-29 along with further details on HS Orka's reinjection strategy. Granting of the operation permit is pending.

HS Orka previously entered into a conditional PPA with Nordural Helguvik sf ("Nordural") to sell power from HS Orka's expansion program to a new aluminum smelter to be constructed and located in Reykjanesbaer. The PPA was executed on April 23, 2007 and contained a number of conditions which were not fulfilled by the requirements in the PPA. Accordingly, Magma holds the view that the PPA has lapsed in accordance with its terms. Nordural disputes this interpretation and maintains that the PPA is a valid agreement. The PPA provides that disputes relating to the PPA shall be resolved by arbitration. Nordural has initiated arbitration proceedings to determine the validity of the PPA. The arbitration proceedings were initiated on July 19, 2010 and a hearing date has been set for May, 2011.

Soda Lake Operation, Nevada, USA

Magma's Soda Lake operation consists of two geothermal, binary power producing facilities currently operating at 15MW gross capacity.

Soda Lake Phase 1 Expansion

The Soda Lake Phase 1 expansion and refurbishment program has been funded to date from cash on hand. Additional financing will be obtained from operating cash flows, a combination of additional equity

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

financing, debt financing on either a corporate or a project basis, and the utilization of available tax credits and/or energy grants.

The Soda Lake Phase 1 expansion highlights include the following key activities in order to achieve nameplate capacity:

- Addition of new production well 45A-33 - placed in service May 2010
- Addition of new production well 41B-33 - placed in service December 2010
- Addition of steam/mixing system well 41-33 – placed in service September 2010
- Plant refurbishments – completed September/October 2009
- Drilling new well 25A-33 – placed in service as an injection well, February 2011

Magma has now completed the Phase 1 expansion at a total cost of \$21 million. Net output from the facility has increased from approximately 60,000 to 84,000 MWh on an annual basis as a result of the Phase 1 expansion program, or approximately half of the original objective of achieving 120,000 MWh/year. Concurrent with the completion of the Phase 1 expansion, Magma is now preparing an application under Section 1603 of the American Recovery and Reinvestment Tax Act of 2009, United States Department of the Treasury, for payment in the form of an Energy Grant, for which up to 30% of the eligible project costs may be received in lieu of tax credits.

The Soda Lake operation sells all of its current electricity output to NV Energy Company (“NV Energy”) under two 30-year PPAs that terminate in 2020. Magma continues to have discussions with NV Energy and one other party to negotiate an improvement in the pricing under the current PPAs and for the planned increase in electricity output from the plant expansion. There is no guarantee that these negotiations will prove successful. However, given Magma’s plans to expand and increase the output of the Soda Lake operation, management is of the opinion that a successful re-negotiation of the existing agreements and/or a new agreement on more favourable terms may be achieved.

Soda Lake Phase 2 Expansion

The Soda Lake Phase 2 expansion commenced in June 2010 with the receipt of the necessary environment permits from the US Bureau of Land Management (“BLM”) to conduct a 3D/3C Seismic survey on the Soda Lake property as part of a \$5.0 million US Department of Energy (“DOE”) grant received by Magma. The survey commenced in July 2010 and it is currently anticipated that, should a successful target be recognized through the efforts of this geophysical survey, production drilling will commence in late 2011. In addition to the seismic survey Magma commenced a thermal gradient drilling program following receipt of permits from the BLM. These two activities combined with an updated resource assessment received from GeothermEx Inc. will define the overall size and drilling and development strategy for the Soda Lake Phase 2 expansion.

Exploration Projects

Since commencement of operations, Magma has acquired a portfolio of geothermal exploration properties from a variety of sources, including BLM lease auctions and sales, a purchase from the University of Chile, applications for new geothermal exploration authorizations from the Government of Peru and purchases from third party leaseholders and landowners.

USA

Magma’s advanced-stage property in the United States is McCoy. In addition, Magma has invested in a number of early stage properties in the USA. Magma continues to evaluate the potential of all of its remaining exploration properties before commencing exploration programs on any of the properties. All

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

of the currently planned exploration program expenditures are discretionary and there are no expenditure commitments on any of Magma's exploration stage properties in the USA.

Chile

In Chile, at Magma's Mariposa reservoir, a third slim hole has been drilled to a depth of 1,075 meters. This is the end of the slim holes drilling program. All geosciences data collected to date has been included in a revised "Geoscience Update Report". In addition, the development plan submitted to convert the Laguana del Maule ("LDM") exploration concession into the 4,000 ha LDM exploitation concession is being updated and a revised plan will be available in early 2011. Plans for large diameter exploration drilling are underway and a partner is being sought before Magma enters into this next phase of exploration in 2011.

Peru

Southern Peru is a region of volcanoes and geothermal systems of significant size. Magma has been actively pursuing additional concessions in Peru to add to its existing portfolio of Sabancaya, Huaynaputina, Ticsani, Collo, and Casiri. A total of 27 geothermal concession areas have now been applied for. Mining rights have been obtained for Sabancaya, Huaynaputina, Ticsani, Collo, Casiri Crucero, and San Pedro in addition to the geothermal applications in progress. Magma is now awaiting the award of the concessions.

Financial Review

For the quarter ended December 31, 2010, Magma recorded a net loss of \$9.1 million (\$0.03 per share), compared to a loss of \$5.2 million (\$0.02 per share) in for the same quarter last year. The financial results for the six months ended December 31, 2010 include the consolidation of the results of HS Orka since August 17, 2010, the date on which Magma acquired control. Therefore, the results for this quarter are not comparable with prior periods.

Gross Profit from Operations

Total gross profit from operations was \$5.5 million for the three months ended December 31, 2010 compared to \$0.3 million for the same quarter last year.

Revenues

Revenues in the current quarter from energy sales totaled \$18.8 million compared to \$1.4 million in the same period last year. Our Soda Lake operation contributed revenues of \$1.7 million for the current quarter (\$1.4 million in Q2, 2009) while HS Orka contributed \$17.1 million of revenues for the current quarter.

HS Orka's revenues of \$17.1 million include \$0.9 million of amortization of the below market contracts recorded on the acquisition of HS Orka. HS Orka's revenues of \$16.2 million, excluding the amortization of the below market contracts, were 15% higher than in the first quarter of this year. Approximately 46% of HS Orka's revenues are sold under PPAs with prices indexed to the price of aluminum, resulting in higher revenues as aluminum prices increase. The average aluminum price for the three months ended December 31, 2010 was \$2,368 per tonne versus \$2,107 per tonne for the first quarter of this year, according to the London Metal Exchange. Year to date revenues recognized by Magma from HS Orka are \$24.1 million. If the acquisition of HS Orka had occurred on July 1, 2010, management estimates that consolidated revenue would have been \$32.1 million.

Our Soda Lake operation's revenues of \$1.7 million include \$0.4 million of energy credit sales. Revenues, excluding the energy credits of \$1.2 million, are slightly down from the same quarter last year due to the de-rating of our capacity by NV Energy during the quarter. Magma is reviewing its position on

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

the de-ration and is also reviewing the sale of excess power now available as a result of the de-ration at current market rates.

Revenues for the six months ended December 31, 2010 totaled \$26.8 million compared to \$2.4 million in the same period last year. The increase of \$24.4 million is due to the inclusion of the results of HS Orka from August 17th, 2010.

Costs of Production

Total costs of production for the quarter totalled \$13.3 million compared to \$1.1 million in the same quarter last year. This included costs for labour, repairs and maintenance, depreciation, supplies, and all other operating costs, including plant general and administrative expenses.

The Soda Lake operation accounted for \$1.1 million of total production costs in the current quarter while HS Orka accounted for the remaining \$12.2 million. Soda Lake's operational costs, net of depreciation, are slightly improved from the same quarter last year as the plant focuses on cost efficiencies.

HS Orka's costs of production are slightly higher than the first quarter of this year primarily due to increased seasonal power purchases. The HS Orka's costs of operation include \$3.5 million of depreciation, \$1.5 million of which relates to the amortization of the fair value adjustments recorded on the acquisition of HS Orka.

Total costs of production for the six months ended December 31, 2010 totalled \$20.5 million compared to \$2.1 million in the same period last year. The increase of \$18.4 million is due to the inclusion of the results of HS Orka from August 17th, 2010.

Expenses

Total expenses for the current quarter are \$3.4 million compared to \$1.8 million in the same quarter last year. The increase of \$1.6 million is primarily due to:

- an increase of \$1.5 million in general and administrative expenses for the quarter compared to the same quarter of last year. General and administrative expenses included the costs of all administrative and certain management personnel as well as the overhead and administrative costs necessary to operate five offices in Canada, USA, Chile, Sweden and Iceland as well as the HS Orka offices. The increase represents additional costs as Magma grew and extended its operations. Also included in this amount is \$0.1 million (Q2, 2010 – \$0.1 million) in relation to stock-based compensation. Stock based compensation expense is recognized over the vesting period of options granted.

Total expenses for the six months ended December 31, 2010 totalled \$6.4 million compared to \$3.7 million for the same period in the prior year. The increase of \$2.7 million is due primarily to a \$1.7 million increase in general and administrative expenses for the same reasons as discussed above and a \$0.9 million increase in professional fees attributable to additional work done in the first quarter of this year related to the acquisition of HS Orka, increased regulatory requirements required for a publicly listed company and activities related to Magma's growth.

Other Income and Expenses

Total other expenses for the quarter ended December 31, 2010 are \$9.4 million compared to other expenses of \$3.5 million in the same quarter last year. The \$9.4 million of other expenses in the current quarter is comprised primarily of:

- loss in the change in the fair value of long term debt of \$2.2 million compared to a gain of \$1.1 million in the same quarter last year. As partial consideration for its acquisition of shares of HS

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

Orka, Magma has a long term bond liability of \$103.8 million. The bonds bear interest at below market rates and contain certain embedded derivatives. The bonds have been accounted for as hybrid instruments designated as held-for-trading and are revalued at each balance sheet date.

- loss in the change in the fair value of derivatives of \$3.6 million. HS Orka has three PPAs under which the sales price of the power sold is partially based on the market price of aluminum. The indexing of the sales price to the price of aluminum gives rise to embedded derivatives which are fair valued at each reporting date. Due to the decrease in aluminum forward prices between September 30, 2010 and December 31, 2010, HS Orka recorded a loss of \$3.6 million relating to the change in fair value of the embedded derivatives.
- interest and other financing costs of \$3.8 million. This includes both the interest on the long-term bond liability, the credit agreement and the debt assumed with the acquisition of HS Orka.

Total other income for the six months ended December 31, 2010 is \$9.5 million compared to other expenses of \$4.3 million for the same period in the prior year. The increase in other income of \$13.8 million is due primarily to:

- equity income earned in the current period of \$7.8 million compared to equity loss of \$1.9 million in the same period last year. Equity income and losses from prior periods relate primarily to earnings earned from Magma's equity investment in HS Orka before controlling interest was acquired on August 17th, 2010.
- change in the fair value of derivatives of \$9.7 million.
- foreign exchange gains of \$6.2 million compared to a loss of \$3.1 million for the same period last year.
- a gain on purchase of \$4.0 million resulting from the acquisition of HS Orka.

These increases were partially offset by:

- loss in the change in the fair value of long term debt of \$7.8 million compared to a gain of \$1.1 million for the same period last year.
- interest and other financing costs of \$6.3 million compared to \$0.1 million for the same period last year.
- loss on the remeasurement of equity interest in HS Orka of \$4.9 million.

Summary of Unaudited Quarterly Results and Selected Annual Information

Magma effectively commenced operations in February 2008. As a result, the expenses incurred during the respective quarters are not reflective of expenses that will be incurred in the future given the relative start-up nature of Magma's operations and aggressive growth to date. In addition, Magma had no revenues from operations prior to the acquisition of the Soda Lake operation on October 3, 2008. Magma accounted for its proportionate share of income from HS Orka using the equity method of accounting in the third and fourth quarter of fiscal 2010. With the further acquisition of another 52.35% of HS Orka during the three months ended September 30, 2010, Magma's results include the consolidation of HS Orka into its financial statements from August 17, 2010. Therefore, comparisons of revenues and expenses between quarters are not meaningful due to the timing and nature of Magma's activities from quarter to quarter. Seasonality has an impact on the Soda Lake operation, as production is lower in the summer months due to hotter ambient temperatures. HS Orka is also impacted by lower demand in the summer months.

Liquidity and Capital Resources

At December 31, 2010, Magma had cash and cash equivalents of \$20.3 million compared to \$46.3 million at September 30, 2010, a decrease of \$26.0 million. The decrease was due primarily to a reclassification of \$28.3 million of cash to restricted cash held as a funded letter of credit as security for a short term loan secured to pay the final payment on December 7, 2010 in respect of the acquisition of HS Orka. The decrease was also due to repayment of borrowings of \$3.9 million and exploration expenditures of \$4.6 million. This was offset by proceeds from the credit facility of C\$8.5 million, and the effect of foreign exchange on cash of \$1.6 million. Magma ended the quarter with working capital of \$7.4 million compared to \$5.6 million at September 30, 2010.

Working capital is defined as current assets minus current liabilities. Working capital calculations or changes are not measures of financial performance, nor do they have standardized meanings, under Canadian GAAP. Readers are cautioned that this calculation may differ among companies and analysts and therefore may not be directly comparable.

Cash and cash equivalents consist of cash and term deposits that are redeemable prior to maturity on demand and without economic penalty to Magma. Magma's exposure to credit risk on its cash and term deposits is limited by maintaining the majority of its cash and term deposits with a major Canadian bank that

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

has a high-credit quality. A minimal amount of cash is held by banks in the countries in which the Company's subsidiaries operate to fund their immediate needs.

Magma has no off-balance sheet arrangements.

Long-term debt consists primarily of long-term bonds and other long-term debt assumed with the acquisition of HS Orka. The principal amount of the bonds and other long-term debt has maturity dates that range from 2016 to 2023.

Management is of the opinion that Magma has sufficient working capital to meet its administrative overhead for the ensuing year. Working capital is being used to fund the Soda Lake Phase 1 expansion. Funding for the Soda Lake Phase 2 expansion and further exploration and development of Magma's exploration properties will be financed via a combination of additional equity financing, debt or tax and other incentives.

During the quarter, the credit agreement with Mr. Ross Beaty, the Company's Chairman and Chief Executive Officer was increased to C\$20 million, pursuant to which the Company has borrowed C\$18.5 million. Magma also borrowed \$27.7 million under a short term loan to make the final payment for HS Orka on December 7, 2010. This loan is secured by the \$28.3 million restricted cash.

Until Magma is able to access cash from its production operations, Magma will require additional capital to continue the exploration and development of its geothermal properties beyond the currently planned exploration programs, to fund Soda Lake Phase 2 of the Soda Lake operation expansion and to develop its other properties. While Magma has been successful in obtaining financing in the past, there is no assurance that such financing will continue to be available or be available on favourable terms in the future.

Related Party Transactions

During the current quarter, the Company extended its existing C\$10 million credit facility with the Chairman from a 12 month term to a 24 month term and has increased the amount available under the facility to C\$20 million. All other terms remain the same.

Management of Financial Risks

Magma's financial instruments consist of cash and cash equivalents, receivables, other assets, accounts payable and accrued liabilities and long-term debt. All financial assets, except those classified as loans and receivables or held-to-maturity, and derivative financial instruments must be measured at fair value. Loans and receivables are measured at amortized cost. All financial liabilities must be measured at fair value when they are classified as held for trading; otherwise, they are measured at amortized cost. Investments classified as held-for-trading are reported at fair market value based on quoted market prices with unrealized gains or losses included in earnings for the period. Investments classified as available-for-sale are reported at fair market value (or marked to market) based on quoted market prices with unrealized gains or losses excluded from earnings and reported as other comprehensive income or loss.

Magma has classified cash and cash equivalents and other assets as held-for-trading, receivables as loans and receivables, accounts payable and accrued liabilities as other financial liabilities and long-term debt as held-for-trading.

Significant financial risk exposure and the way in which such exposure is managed by Magma are as follows:

Credit Risk

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

Magma's exposure to credit risk is influenced mainly by the individual characteristics of each customer. Over 50% of the Magma's revenue is attributable to sales transaction with three customers. Magma has set a credit policy where all new customers are evaluated. Payment history of new customers is checked and credit limits are set. Magma establishes an allowance for impairment that represents its estimate of incurred losses in respect of trade and other receivables.

Liquidity Risk

Liquidity risk is the risk that Magma will be unable to meet its financial obligations as they become due. Magma manages liquidity risk by ensuring that it has sufficient cash, credit facilities and other financial resources available to meet its obligations. Magma forecasts cash flows for a period of 12 months to identify financial requirements. These requirements are met through a combination of cash flows from operations, credit facilities and accessing capital markets.

Market Risk

The significant market risk exposures to which Magma is exposed are interest rate risk, currency risk and commodity price risk.

Interest Rate Risk

Interest rate risk is the risk that the future cash flows and fair values of Magma's investments and debts will fluctuate because of changes in market interest rates. Generally, Magma's interest income will be reduced during sustained periods of lower interest rates as higher yielding cash equivalents and short-term investments mature and the proceeds are invested at lower interest rates

Currency Risk

The functional currency of the Company and its subsidiaries, except HS Orka, is the Canadian dollar. The carrying amounts of monetary assets and liabilities denominated in currencies other than the Canadian dollar are subject to fluctuations in the underlying foreign currency exchange rates. Gains and losses on such items are included as a component of net loss for the year.

The functional currency of HS Orka is the ISK and, therefore, HS Orka is exposed to currency risk on its sales, purchases and borrowings that are denominated in currencies other than ISK. The currencies in which these transactions are primarily denominated are the U.S. dollar, Swiss franc, Euro and Japanese yen. HS Orka does not in general hedge against foreign exchange rate risk, but may hedge single, large transactions with forward foreign exchange agreements for shorter periods. HS Orka does not hedge its currency risk on its long-term debt denominated in foreign currencies.

The reporting currency selected for the presentation of these consolidated financial statements is the U.S. dollar. For presentation purposes, all assets and liabilities are translated into U.S. dollars at the exchange rate in effect at the balance sheet date. As a result, reported amounts of all assets and liabilities will fluctuate with changes in the underlying Canadian dollar – U.S. dollar exchange rate. Gains and losses arising upon translation into U.S. dollars are reported as a component of accumulated other comprehensive income or loss.

Commodity Price Risk

Magma's commodity consists of power produced. At the Magma's Soda Lake facility, all power currently produced is sold to one customer under the terms of a 30-year PPA which consists of a fixed price component and an escalating price component. Because all power produced will be sold at rates specified by the PPA until 2020, revenue from the Soda Lake facility is not exposed to significant commodity price risk.

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

HS Orka has entered into PPAs for the sale of electrical power whereby the sales price of the power is partially based on the market price of aluminum. Therefore, its revenues and profitability of its operations are significantly exposed to fluctuations in the price of aluminum.

The bonds issued as partial consideration for the purchase of shares of HS Orka are subject to adjustment based on the price of aluminum. Therefore, the principal amounts owed on the due date, and the annual interest payments thereon, will fluctuate with the price of aluminum.

A 10% increase or decrease in the price of aluminum at December 31, 2010 would have increased or decreased net income by approximately \$27 million.

Share Capital and Financings

As at December 31, 2010, the Company had 313,966,171 issued and outstanding common shares.

As at December 31, 2010, the Company had options outstanding for the acquisition of up to 3,470,000 common shares. The options vest over a two-year period commencing with one-third upon the date of grant.

Issued and outstanding shares of the Company, at February 14, 2011 are 313,966,171.

Commitments and Contingencies

Magma has entered into lease agreements for the rental of office facilities that require minimum payments in the aggregate as follows:

(expressed in thousands of dollars)

(expressed in thousands of US dollars)

Fiscal 2011	\$	85
Fiscal 2012		167
Fiscal 2013		94
Fiscal 2014		61
Fiscal 2015		31
Total lease commitments	\$	438

Outlook

As Magma now has majority ownership in HS Orka, Magma's future consolidated financial statements will incorporate HS Orka's financial results for the full period. Therefore, Magma's consolidated revenues will be impacted by the indexation of HS Orka's revenues to changes in aluminum prices. As aluminum prices increase so will revenues and the change in the fair value of the embedded derivatives in sales contracts. This will be somewhat offset by the change in the fair value of long term debt as both Magma's existing long-term debt and the debt assumed on the final acquisition of HS Orka will increase as aluminum prices increase.

Given the acquisition opportunities available in the industry and Magma's own portfolio of projects, management is optimistic that it will continue to grow Magma significantly and achieve its mission of becoming one of the leading primary geothermal power companies in the world.

Management's Discussion and Analysis of Financial Condition and Results of Operations

For the Six Months Ended December 31, 2010

February 14, 2011

Critical Accounting Policies and Management's Estimates

The preparation of financial statements in conformity with Canadian GAAP requires management to make estimates and assumptions that affect the amounts reported in the consolidated financial statements and related notes. Significant areas where management's judgment is applied are depreciation, the assessment of asset impairment, stock-based compensation, the future price of aluminum, financial instruments, future income tax assets and liabilities and associated reserves, tax positions, geothermal properties and asset retirement obligations. Actual results could differ from those estimates.

The accounting policies described below are considered by management to be essential to the understanding and reasoning used in the preparation of Magma's financial statements and the uncertainties that could have a bearing on its financial results.

Business combinations and related sections

CICA Handbook Sections 1582, "Business Combinations", 1601, "Consolidated Financial Statements", and 1602 "Non-Controlling Interests", replace CICA Handbook Sections 1581 and 1600. The new standards revise guidance on the determination of the carrying amount of assets acquired and liabilities assumed, goodwill and accounting for non-controlling interests at the time of a business combination. These standards are effective for any business combinations for which the acquisition date is on or after the beginning of the first annual reporting period beginning on or after January 1, 2011, with early adoption permitted. Magma has elected to early adopt this standard and has applied this to the HS Orka acquisition.

Acquisitions of subsidiaries and businesses (other than entities which were under the control of the parent) are accounted for using the acquisition method. The cost of the business combination is measured as the aggregate of the fair value (at the date of exchange) of assets given, liabilities incurred or assumed, and equity instruments issued by the Company in exchange for control of the acquiree. The acquiree's identifiable assets and liabilities that meet the conditions for recognition under Section 1582 are recognized at their fair value at the acquisition date except for non-current assets (or disposal groups) that are classified as held for sale in accordance with Section 3475 "Disposal of Long-lived Assets and Discontinued Operations", which are recognized and measured at fair value less cost to sell.

Goodwill arising on acquisition is recognized as an asset and initially measured at cost, being the excess of the cost of the business combination over the Company's interest in the net fair value of the identifiable assets and liabilities recognized. If, after reassessment, the Company's interest in the net fair value of the acquiree's identifiable assets and liabilities exceeds the cost of the business combination, the excess is recognized immediately in profit or loss as a bargain purchase.

Under Section 1602 "Non-controlling Interest", transactions that result in changes in ownership interests while retaining control are accounted for as transactions with equity holders in their capacity as equity holders. As a result no gain or loss on such changes is recognized. Also, no change in the carrying amounts of assets (including goodwill) or liabilities is recognised as a result of such transaction.

Equity investments

Magma accounts for investments subject to significant influence by the equity method. Investments subject to significant influence are initially recorded at the fair value of the consideration given up to the date of equity interest is acquired. Thereafter, Magma records its prorata share of the equity investee's income or loss for the year as an increase or decrease in the carrying amount of the investment. Dividends received would be recorded as a decrease to the carrying amount of the investment. At each balance sheet date we assess whether there are any indications that the investment may be impaired.

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

Financial Instruments

Magma's financial instruments consist of cash and cash equivalents, receivables, other assets, accounts payable and accrued liabilities, and long-term debt.

Financial assets are designated into one of the following four categories at initial recognition:

- Held for trading – recorded at fair value with resultant gain or loss recognized in profit and loss
- Held to maturity – recorded at amortized cost with resultant gain or loss recognized in profit and loss
- Available for sale – recorded at fair value with resultant gain or loss recognized in other comprehensive income
- Loans and receivables – recorded at amortized cost with resultant gain or loss recognized in profit and loss

Financial liabilities are designated into one of the following categories at initial recognition:

- Held for trading – recorded at fair value with resultant gain or loss recognized in profit and loss
- Other financial liabilities – recorded at amortized cost with resultant gain or loss recognized in profit and loss

Fair value estimates are made at the balance sheet date based on relevant market information and information about the financial instrument. These estimates are subjective in nature and may involve significant uncertainties in matters of judgment and, therefore, cannot be determined with precision.

Plant and equipment

Operating assets are stated at cost, net of accumulated amortization and accumulated impairment losses. The major categories include power plants, boreholes, electrical systems, hot water and cold water distribution systems, housing and other operating assets. Major additions to operating assets including betterments, are capitalized and repairs and maintenance are expensed. Amortization is provided on a straight-line basis over the estimated useful lives of the plant assets. Power plants are 20 - 40 years, boreholes are 20 years, electrical systems are 50 years, hot water and cold water distribution systems are 50 years, housing is at 50 years, and other operating assets vary from 5 to 20 years. Costs include expenditures that are directly attributable to the acquisition of the asset. The cost of self-constructed assets includes the cost of materials and direct labour, any other costs directly attributable to bringing the assets to a working condition for their intended use and capitalized borrowing costs.

Geothermal properties

Magma capitalizes all costs related to investments in geothermal property interests on a property by property basis. Such costs include acquisition costs and exploration and development expenditures, net of any recoveries. Costs are deferred until such time as the extent of the resources has been determined and geothermal property interests are either developed, the property sold or the rights are allowed to lapse. Costs that are incurred but not for a specific identifiable property are classified as general and are expensed in the period incurred.

Capitalized costs are reviewed, on a property by property basis, to consider whether there are any conditions that may indicate impairment. When the carrying value of a property exceeds its net recoverable amount estimated by quantifiable evidence of an economic resource or reserve, joint venture expenditure commitments or Magma's assessment of its ability to sell the property for an amount less than the deferred costs, the property is written down to its fair value to recognize the impairment.

**Management's Discussion and Analysis
of Financial Condition and Results of Operations**

For the Six Months Ended December 31, 2010

February 14, 2011

From time to time, Magma may acquire or dispose of a geothermal property interest pursuant to the terms of an option agreement. Where the options are exercisable entirely at the discretion of Magma or the optionee, the amounts payable or receivable are recorded as property costs or recoveries when the payments are made or received.

Capitalized costs are depleted over the useful lives of the properties upon commencement of commercial production or written-off if the properties are abandoned or the concessions allowed to lapse.

Depletion on geothermal properties in production is provided on a straight-line basis over 40 years.

Although Magma has taken steps to verify the title to geothermal properties in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee Magma's title. Property title may be subject to unregistered prior agreements or transfers and title may be affected by undetected defects.

Environmental protection practices and asset retirement obligations

Magma is subject to the laws and regulations relating to environmental matters in all jurisdictions in which it operates, including provisions relating to property reclamation, discharge of hazardous material and other matters. Magma may also be held liable should environmental problems be discovered that were caused by former owners and operators of its properties and properties in which it has previously had an interest.

Magma conducts its geothermal exploration and development activities in compliance with applicable environmental protection legislation. Magma is not aware of any existing environmental problems related to any of its current or former properties that may result in material liability to Magma.

Magma recognizes the fair value of liabilities for asset retirement obligations in the period in which a reasonable estimate of such costs can be made. The asset retirement obligation is recognized at fair value and recorded as a liability with a corresponding increase to the carrying amount of the related long-lived asset. Subsequently, the asset retirement cost is allocated to expenses using a systematic and rational method and is also adjusted to reflect period-to-period changes in the liability resulting from passage of time and revisions to either timing or the amount of the original estimate of the undiscounted cash flow. The fair value of the legal obligation for asset retirement is assessed each reporting period.

Magma's obligation to restore the site underlying its geothermal power plant at the Soda Lake operation is contingent upon the cessation of operations at that location. Magma intends to continue operating this site indefinitely and has the unilateral right to renew all underlying land leases necessary to allow it to do so.

It is reasonably possible that our estimates of any reclamation and site restoration liabilities could change as a result of changes in regulations or cost estimates. The effect of changes in estimated costs is recognized on a prospective basis.

As at December 31, 2010, Magma has not recognized any amounts in connection with asset retirement obligations.

Foreign currency translation

The functional currency of the Company and each of its subsidiaries, except HS Orka, is the Canadian dollar. As the operations of foreign subsidiaries are regarded as being integrated with the parent company, the temporal method of translation has been applied. Under this method, monetary assets and liabilities are translated into Canadian dollars at the exchange rate in effect on the balance sheet date while non-monetary assets and liabilities, revenues and expenses are translated using exchange rates in

Management's Discussion and Analysis of Financial Condition and Results of Operations

For the Six Months Ended December 31, 2010

February 14, 2011

effect at the time of each transaction. Gains and losses from these translations are included in the results from operations.

The functional currency of HS Orka is the Icelandic Kroner ("ISK") and HS Orka is regarded as being self-sustaining. As a result, the current rate method of translation has been applied. Under this method, assets and liabilities are translated into Canadian dollars at the exchange rate in effect on the balance sheet, revenues and expenses are translated using exchange rates in effect at the time of each transaction. Gains and losses from these translations are recognized in other comprehensive income.

The reporting currency selected for the presentation of these consolidated financial statements is the US dollar. For presentation purposes, consolidated assets and liabilities are translated into U.S. dollars at the exchange rate in effect at the balance sheet date. Consolidated revenues and expenses are translated into U.S. dollars at rates in effect at the time of the underlying transactions. Gains and losses arising from translation of the consolidated financial statements into U.S. dollars are reported as a separate component of shareholders' equity within accumulated other comprehensive income (loss.)

Goodwill and goodwill impairment

Business acquisitions are accounted for using the purchase method whereby assets acquired and liabilities assumed are recorded at fair value as of the date of the acquisition with the excess of the purchase price over such fair value recorded as goodwill. Goodwill is assigned to the reporting unit and is not amortized.

Goodwill of a reporting unit is tested for impairment on an annual basis or more frequently when an event or circumstance occurs that more likely than not reduces the fair value of a reporting unit below its carrying amount. Magma compares the estimated fair value of the reporting unit to which goodwill was assigned with the carrying amount of the reporting unit. When the carrying amount of a reporting unit exceeds its estimated fair value, Magma measures the goodwill impairment loss, if any, as the excess of the carrying amount of the reporting unit's goodwill over its estimated fair value. A goodwill impairment loss is not reversed if the fair value of the reporting unit's goodwill subsequently increases.

Recent accounting pronouncements

Recent accounting pronouncements issued which may impact us in the future are as follows:

International Financial Reporting Standards ("IFRS") Changeover Plan

Effective January 1, 2011, Canadian publicly listed entities will be required to prepare their financial statements in accordance with IFRS, instead of current Canadian GAAP. First-time adoption is mandatory for interim and annual financial statements relating to annual periods beginning on or after January 1, 2011. Accordingly, although Magma will first report its results under IFRS in the year ending June 30, 2012, the underlying conversion will be based on an effective transition date of July 1, 2011.

Magma has established an IFRS conversion team to lead the significant undertaking of transition from Canadian GAAP to IFRS. Magma is currently preparing a detailed IFRS conversion plan, which will continue to evolve to accommodate the expected development of IFRS accounting standards past 2012.

Magma has identified four phases to its IFRS conversion: scoping and planning, detailed assessment, implementation and post implementation. The scoping and planning phase involves establishing a project team and organizational structure, including oversight of the process. This phase also entails an initial assessment of the key areas where IFRS transition may have a significant impact and present significant challenges. Magma is currently working through the scoping and planning phase. The second phase, detailed assessment, involves in-depth technical analysis that will result in understanding potential impacts, decisions on accounting policy choices and the drafting of accounting policies. Magma expects

Management's Discussion and Analysis of Financial Condition and Results of Operations

For the Six Months Ended December 31, 2010

February 14, 2011

to commence this detailed technical analysis in early 2011. As Magma has not yet started its detailed assessment, the financial reporting impact of the transition to IFRS cannot be reasonably estimated at this time. In addition this will result in identifying resource and training requirements, processes for preparing financial statements, establishing IT system requirements and preparing detailed transition plans. During the implementation phase, Magma will identify and carry out the implementation requirements to effect management's accounting choices, develop sample financial statements, implement business and internal control requirements, calculate the opening balance sheet at July 1, 2011 and other transitional reconciliations and disclosure requirements. The last phase of post implementation will involve continuous monitoring of changes in IFRS throughout the implementation process (through to 2012).

Magma is developing and maintaining our IFRS competencies by addressing training requirements at various levels of the organization. These sessions are ongoing and are provided by external advisors. Magma will continually assess training and resource requirements as the project progresses.

HS Orka currently reports under IFRS. In order to accurately reflect Magma's equity earnings from HS Orka, Magma has reconciled the financial statements of HS Orka under IFRS to Canadian GAAP. The differences identified in HS Orka's financial statements under IFRS compared to Canadian GAAP are as follows:

- In accordance with IAS 16, HS Orka revalued certain of its operating assets on December 31, 2009 and January 1, 2008. Revaluation of long-lived assets is not permitted under Canadian GAAP.
- HS Orka has recognized a pension fund commitment with respect to pension plan arrangements it maintains for its current and former employees. These pension plans include defined benefit and defined contribution plans and are multi-employer plans. Obligations for contributions to defined contribution plans are recognized as an expense in profit or loss as incurred. With respect to defined benefit plans, HS Orka's net obligation or pension fund commitment is calculated separately for each plan by estimating the amount of future benefit that current and former employees have earned in return for their service in the current and future periods. The calculation is performed annually by qualified actuaries with the changes in pension fund commitment recognized in profit or loss for the period.

The provision is recognized if, as a result of a past event, HS Orka has a present legal or constructive obligation that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation.

Under Canadian GAAP, HB Section 3461, "*Employee Future Benefits*", defines a defined benefit plan as a benefit plan that specifies either the benefits to be received by an employee, or the method of determining those benefits. A multi-employer plan is a defined benefit plan to which two or more unrelated entities contribute, usually pursuant to one or more collective bargaining agreements. Although a multi-employer plan may have the characteristics of a defined benefit plan, sufficient information to follow the standards on defined benefit plans, as stated in HB 3461.024 – 3461.134, is normally not available. In such circumstances, a multi-employer plan is accounted for following the standards on defined contribution plans.

HS Orka has accounted for its pension arrangements as a defined benefit plan under IFRS; however, there is not sufficient information to present all the required disclosures for a defined benefit plan. As such, the accounting would be as for a defined contribution plan in accordance with Canadian GAAP.

- In July 2009, HS Orka sold certain land to a third party and has leased the land back from the

Management's Discussion and Analysis of Financial Condition and Results of Operations

For the Six Months Ended December 31, 2010

February 14, 2011

purchaser. The gain on the sale of the property was recorded in the income statement and included within the financial results as at December 31, 2009 in accordance with IFRS. Under both IFRS and Canadian GAAP, the leaseback has been classified as an operating lease. Under HB Section 3065, "Leases", a sale-leaseback transaction involves the sale of property with the purchaser concurrently leasing the same property back to the seller. This definition is consistent with the definition under IAS 17. Under Canadian GAAP, any gain or loss arising from a sale-leaseback transaction is accounted for based on the nature of the resulting leaseback. Where the leaseback is classified as an operating lease, any gain or loss is deferred and amortized over the lease term. In accordance with IAS 17, any gain or loss arising from the sale-leaseback transaction is recognized in profit or loss for the period if the transaction takes place at fair value and the leaseback is classified as operating.

Disclosure Controls and Procedures and Internal Control Over Financial Reporting

Disclosure Controls and Procedures

The Company's management, with the participation of its Chief Executive Officer and Chief Financial Officer, have evaluated the effectiveness of the Company's disclosure controls and procedures. Based on the results of that evaluation, the Company's Chief Executive Officer and Chief Financial Officer have concluded that, as at December 31, 2010, the Company's disclosure controls and procedures were effective to provide reasonable assurance that the information required to be disclosed by Magma in reports it files is recorded, processed, summarized and reported within the appropriate time periods and forms.

Internal Control Over Financial Reporting

The Company's management, under the supervision of the Audit Committee and its Chief Executive Officer and Chief Financial Officer, are responsible for establishing and maintaining adequate internal control over financial reporting. The Company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles the Company's controls include policies and procedures that:

- Pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of Magma;
- Provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP, and receipts and expenditures of Magma are made only in accordance with authorizations of management and the directors of Magma; and
- Provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use or disposition of Magma's assets that could have a material effect on the annual financial statements or interim financial statements.

Management has evaluated the effectiveness of our internal control over financial reporting. Based on this assessment, Management has concluded that, as at December 31, 2010, Magma's internal control over financial reporting was effective.

There have been no significant changes to the Company's internal controls over financial reporting during the most recent fiscal period that has materially affected, or is reasonably likely to materially affect, the Company's internal control over financial reporting.

Management's Discussion and Analysis of Financial Condition and Results of Operations

For the Six Months Ended December 31, 2010

February 14, 2011

Limitations of Controls and Procedures

The Company's management, including the Chief Executive Officer and Chief Financial Officer, believe that any disclosure controls and procedures or internal controls over financial reporting, no matter how well conceived and operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met. Further, the design of a control system must reflect the fact that there are resource constraints, and the benefits of controls must be considered relative to their costs. Because of the inherent limitations in all control systems, they cannot provide absolute assurance that all control issues and instances of fraud, if any, within the Company have been prevented or detected. These inherent limitations include the realities that judgments in decision-making can be faulty, and that breakdowns can occur because of a simple error or mistake. Additionally, controls can be circumvented by the individual acts of some persons, by collusion of two or more people, or by unauthorized override of the control. The design of any systems of controls also is based in part upon certain assumptions about the likelihood of future events, and there can be no assurance that any design will succeed in achieving its stated goals under all potential future conditions. Accordingly, because of the inherent limitations in a cost effective control system, misstatements due to error or fraud may occur and not be detected.

Cautionary Statement Regarding Forward-Looking Information

This MD&A contains certain "forward-looking information" which may include, but is not limited to: statements with respect to future events or future performance; management's expectations regarding our growth; results of operations; business prospects and opportunities; expansion programs at HS Orka's Svartsengi and Reykjanes power plants and the Soda Lake operation; the negotiation of an improvement in pricing under the current Soda Lake PPAs; programs to upgrade and develop inferred and indicated resources at HS Orka's properties and the Soda Lake operation; permitting for Magma's expansion and exploration programs; negotiation of a PPA for expansion to HS Orka's Svartsengi and Reykjanes power plants; estimates of recoverable geothermal energy "resources" or energy generation capacities; estimates or predictions of gas content, porosity, permeability, fractures, reservoir temperature, reservoir pressure, steam cap temperature, well-head pressure and scaling; and data collection, expansion, upgrade, development, reinjection, rework or inhibition plans for any of Magma's properties. Such forward-looking information reflects management's current beliefs and is based on information currently available to management. Often, but not always, forward-looking statements can be identified by the use of words such as "plan", "expect", "is expected", "budget", "estimates", "goals", "intend", "targets", "aims", "appears", "likely", "typically", "potential", "probable", "continue", "strategy", "proposed", or "believes" or variations (including negative variations) of such words and phrases or may be identified by statements to the effect that certain actions "may", "could", "should", "would" or "shall" be taken, occur or be achieved.

A number of known and unknown risks, uncertainties and other factors, may cause our actual results or performance to materially differ from any future results or performance expressed or implied by the forward-looking information. Such factors include, but are not limited to: new production wells at our Soda Lake operation may not define sufficient additional and commercially viable geothermal resources to support our planned expansion programs; failure to discover and establish economically recoverable and sustainable geothermal resources through our exploration and development programs; geothermal exploration and development programs are highly speculative, are characterized by significant inherent risk and costs, and may not be successful; we have a limited operating history; our financial performance depends on our successful operation of geothermal power plants, which is subject to various operational risks; our geothermal resources may decline over time and may not remain adequate to support the life of our power plants; imprecise estimation of probability simulations prepared to predict prospective geothermal resources or energy generation capacities; imprecise estimation of resources and reserves of geothermal energy; variations in project parameters and production rates; geological occurrences beyond

Management's Discussion and Analysis of Financial Condition and Results of Operations

For the Six Months Ended December 31, 2010

February 14, 2011

our control may compromise our operations and their capacity to generate power; inability to obtain the financing we need to pursue our growth strategy; it is very costly to place geothermal resources into commercial production; we may continue to incur negative operating cash flow for the foreseeable future; energy prices are subject to dramatic and unpredictable fluctuations; industry competition may impede our ability to access suitable geothermal resources; we may be unable to enter into PPAs on terms favourable to us, or at all; the cancellation or expiry of government initiatives to support renewable energy generation may adversely affect our business; impact of significant capital cost increases; unexpected or challenging geological conditions; changes to regulatory requirements, both regionally and internationally, governing development, geothermal resources, production, exports, taxes, labour standards, occupational health, waste disposal, toxic substances, land use, environmental protection, project safety and other matters; failure to obtain or maintain necessary licenses, permits and approvals from government authorities; the success of our business relies on attracting and retaining key personnel; the risk of human error; our officers and directors may have conflicts of interests arising out of their relationships with other companies; we may face adverse claims to our title; developments regarding Aboriginal, First Nations and Indigenous peoples; a significant portion of our revenue is attributed to payments made by a single power purchaser under the Soda Lake PPAs; fluctuations in foreign currency exchange and interest rates may affect our financial results; we may not be able to successfully integrate businesses or projects that we acquire in the future; our insurance policies may be insufficient to cover losses; the government of Iceland may take action which results in fines or other penalties levied against Magma or HS Orka; the government of Iceland may invalidate or wind-down Magma's acquisition of shares of HS Orka; the government of Iceland may invalidate or wind-down the prior privatization of Hitaveita Sudurnesja (now HS Orka); the government of Iceland may pass legislation or constitutional amendments to nationalize or restrict private or foreign ownership in Iceland's energy sector or to reduce the term of utilization rights for water or geothermal resources owned by municipalities or the state, increase levies for such utilization rights or restrict transfers of such utilization rights; Magma may not be compensated for certain government action relating to Magma's interest in HS Orka; aluminum price risk; the results of operations of the companies in which we hold a significant interest; risks associated with inter regional transmission grids; host country economic, social and political conditions can negatively affect our operations; economic, social and political risks arising from potential inability of end-users to support our properties; the fluctuation of our common share price could result in investors losing a significant part of their investment; we have no dividend payment policy and do not intend to pay any cash dividends in the foreseeable future; the issuance of additional equity securities may negatively impact the trading price of our common shares; the risk of volatility in global financial conditions, as well as significant decline in general economic conditions; and other development and operating risks. There may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. These factors are not intended to represent a complete list of the risk factors that could affect us. Additional risk factors are discussed in the section entitled "Management of Financial Risks" in this MD&A and in the section entitled "Risk Factors" in the Company's AIF for the year ended June 30, 2010, available on the SEDAR website at www.sedar.com. These factors should be considered carefully and investors should not place undue reliance on forward-looking information.

The forward-looking information contained in this MD&A is based upon what management believes to be reasonable assumptions, including, but not limited to: the government of Iceland not invalidating or winding-down the Final Acquisition; the government of Iceland not winding-down the prior privatization of Hitaveita Sudurnesja (now HS Orka); the government of Iceland not passing legislation or constitutional amendments to nationalize or restrict private or foreign ownership in Iceland's energy sector or to reduce the term of utilization rights for water or geothermal resources owned by the municipalities or the state, increase levies for such utilization rights or restrict transfers of such utilization rights; the effects of any increase in power production from HS Orka or our Soda Lake Operation; the success and timely

Management's Discussion and Analysis of Financial Condition and Results of Operations

For the Six Months Ended December 31, 2010

February 14, 2011

completion of planned exploration and expansion programs, including improvements to facilities at HS Orka's Svartsengi and Reykjanes power plants or our Soda Lake Operation; our ability to comply with local, state and federal regulations dealing with operational standards and environmental protection measures; our ability to negotiate and obtain PPAs on favourable terms; our ability to obtain necessary regulatory approvals, permits and licences in a timely manner; the availability of materials, components or supplies; our ability to solicit competitive bids for drilling operations and obtain access to critical resources; the growth rate in net electricity consumption; support and demand for non-hydroelectric renewables; government initiatives to support the development of renewable energy generation; the accuracy of volumetric reserve estimation methodology and probabilistic analysis used to estimate the quantity of potentially recoverable energy; the accuracy of the analysis used to estimate resources and reserves of geothermal energy; environmental, administrative or regulatory barriers to the exploration and development of geothermal resources on our properties; geological, geophysical, geochemical and other conditions at our properties; the reliability of technical data, including extrapolated temperature gradient, geophysical and geochemical surveys and geothermometer calculations; capital expenditure estimates; availability of capital to fund exploration, development and expansion programs; our competitive position; and general economic conditions. Forward-looking information is also based upon the assumption that none of the identified risk factors that could cause actual results to differ materially from the forward-looking information will occur.

Although the forward-looking information contained in this MD&A is based upon what management believes to be reasonable assumptions, there can be no assurance that such forward-looking information will prove to be accurate, as actual results and future events could differ materially from those anticipated in such information. Accordingly, readers should not place undue reliance on forward-looking information. Such forward-looking information is made as of the date of this MD&A and, other than as required by applicable securities laws, Magma assumes no obligation to update or revise such forward-looking information to reflect new events or circumstances.

Additional information about Magma, including Magma's's Annual Information Form is available on SEDAR at www.sedar.com and on Magma's's website at www.magmaenergycorp.com.
